

Autumn 2 Year 5 – Systems and Searching

Computing Concepts

Presentation

Presentation
Expressing ideas

Systems

Systems
Knowing how to create and use programmes

Digital world

Digital World
Knowing how to use a range of technology

Curriculum Objectives

- Understand computer networks, including the internet; how they can provide multiple services, such as the World Wide Web, and the opportunities they offer for communication and collaboration
- Use search technologies effectively, appreciate how results are selected and ranked, and be discerning in evaluating digital content

Learning Overview

Learners develop their understanding of computer systems and how information is transferred between systems and devices. Learners consider small-scale systems as well as large-scale systems. They explain the input, output, and process aspects of a variety of different real-world systems. Learners discover how information is found on the World Wide Web, through learning how search engines work (including how they select and rank results) and what influences searching, and through comparing different search engines.

Lessons will cover:

- Systems
- Computer systems and us
- Searching the web
- Selecting search results
- How searches are ranked?
- How are searches influenced?
